

and what can go wrong...

WHAT IS BOOSTING AI?

WHAT WAS AI THEN?

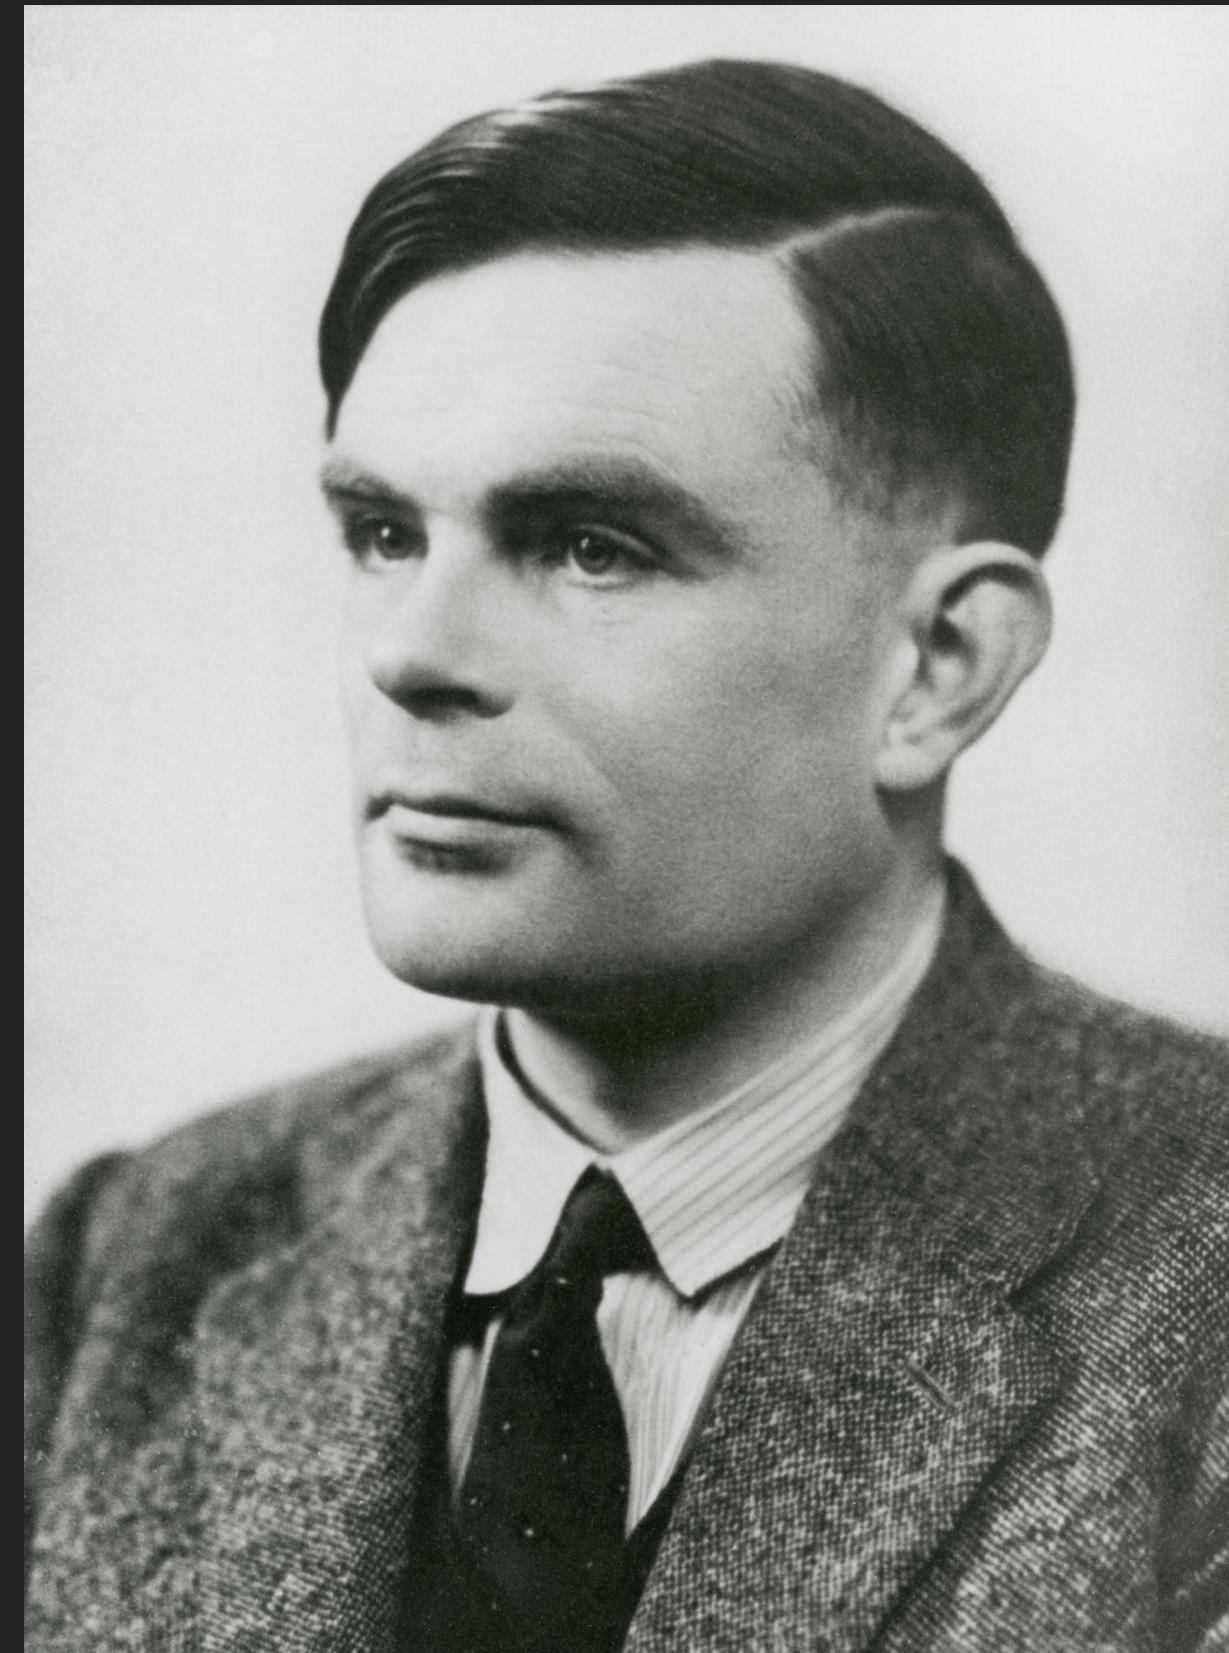

- ▶ Prolog, Lisp
- ▶ Planning, A*, Frames, Scripts
- ▶ Knowledge
- ▶ Expert Systems
- ▶ Great hopes
- ▶ Disappointment
- ▶ Half-time, AI is losing
- ▶ Second AI Winter follows

30 SOMETHING YEARS BEFORE

CAN MACHINES THINK?

- ▶ 1950
- ▶ Alan Turing asks the question in “Computing Machinery and Intelligence”
- ▶ The imitation game
- ▶ The Turing test

ARTIFICIAL INTELLIGENCE

- ▶ 1952
 - ▶ UNIVAC predicts victory of Eisenhower
 - ▶ TV host “talks” to computer

- ▶ 1955
 - ▶ **McCarthy** and Minsky coin the term

1959

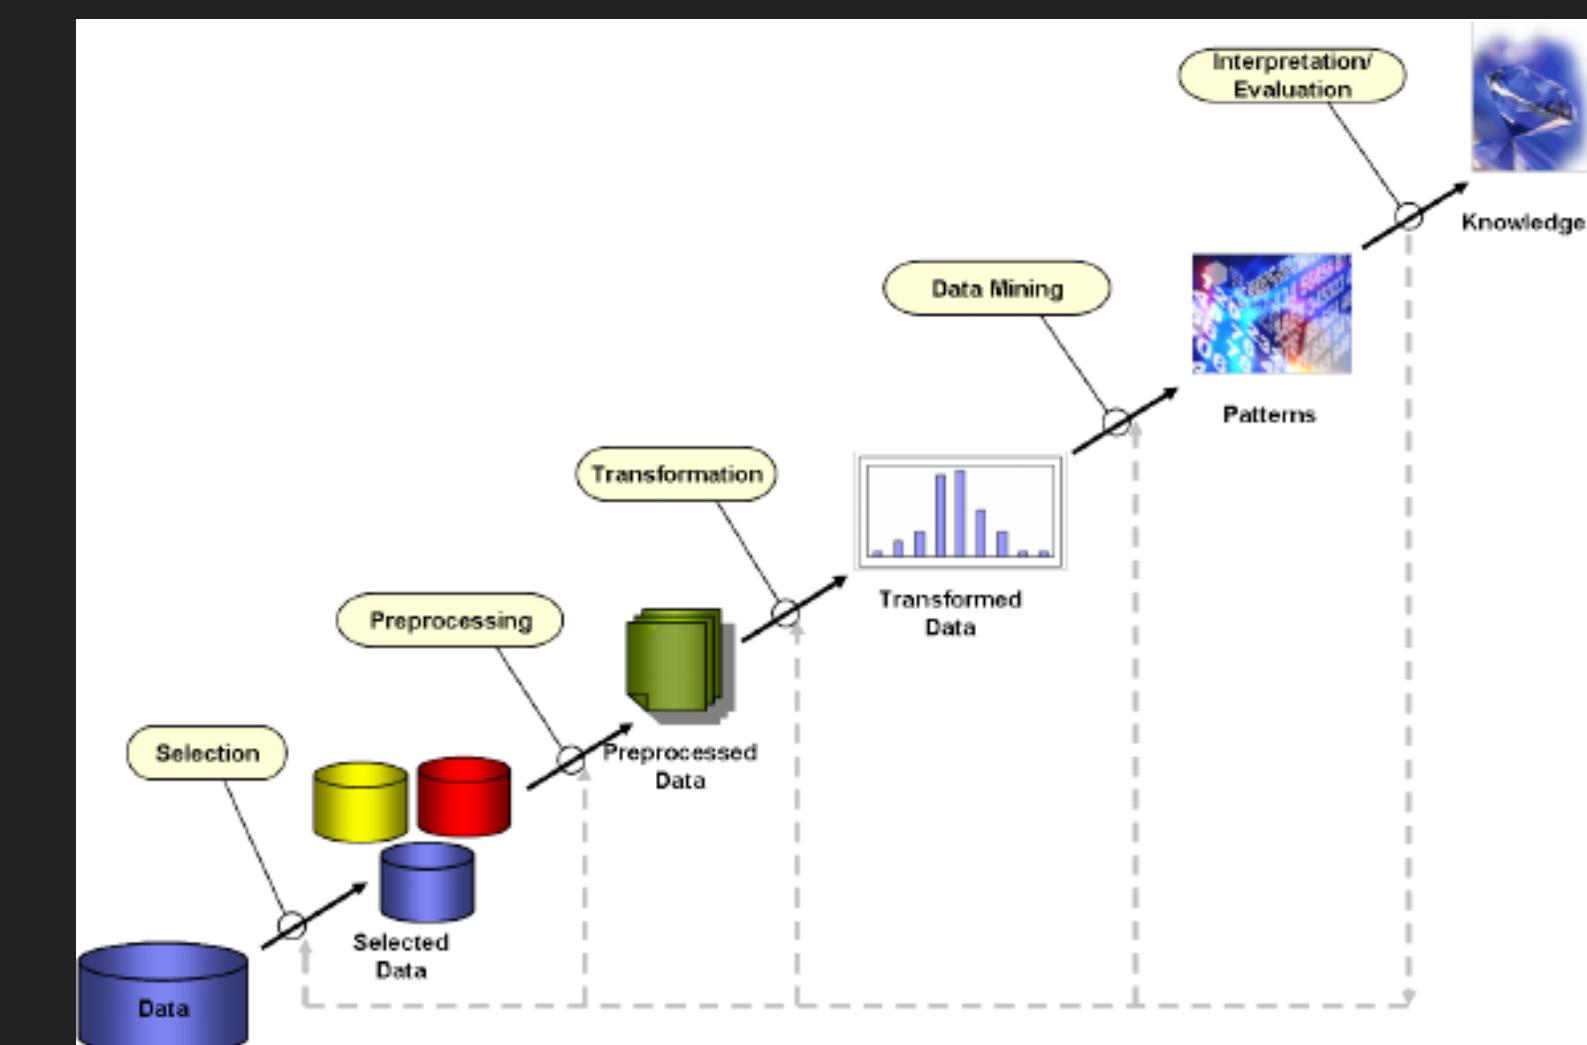

MACHINE LEARNING

- ▶ 1959
- ▶ Arthur Samuel coined the term
- ▶ His checkers game program was able to learn how to play
- ▶ machine played against itself to improve board evaluation

DATA MINING

- ▶ 1983
 - ▶ Data fishing or experimentation
- ▶ 1990s
 - ▶ KDD - Knowledge Discovery in Databases
 - ▶ KDD-95 conference
- ▶ Since then
 - ▶ A problem-driven discipline
 - ▶ Very much human dependent (with exceptions)

DATA SCIENCE

- ▶ 1960
 - ▶ as "computer science"
- ▶ 1996, 1997
 - ▶ Statistics=Data Science?
- ▶ 2001 - 2003
 - ▶ Scientific journals
- ▶ 2000 circa
 - ▶ Big Data: Volume, Variety, Velocity
- ▶ 2012
 - ▶ Data Scientist: the sexiest job

**Business
Review**

GETTING
Data Scientist:
The Sexiest Job of the 21st Century

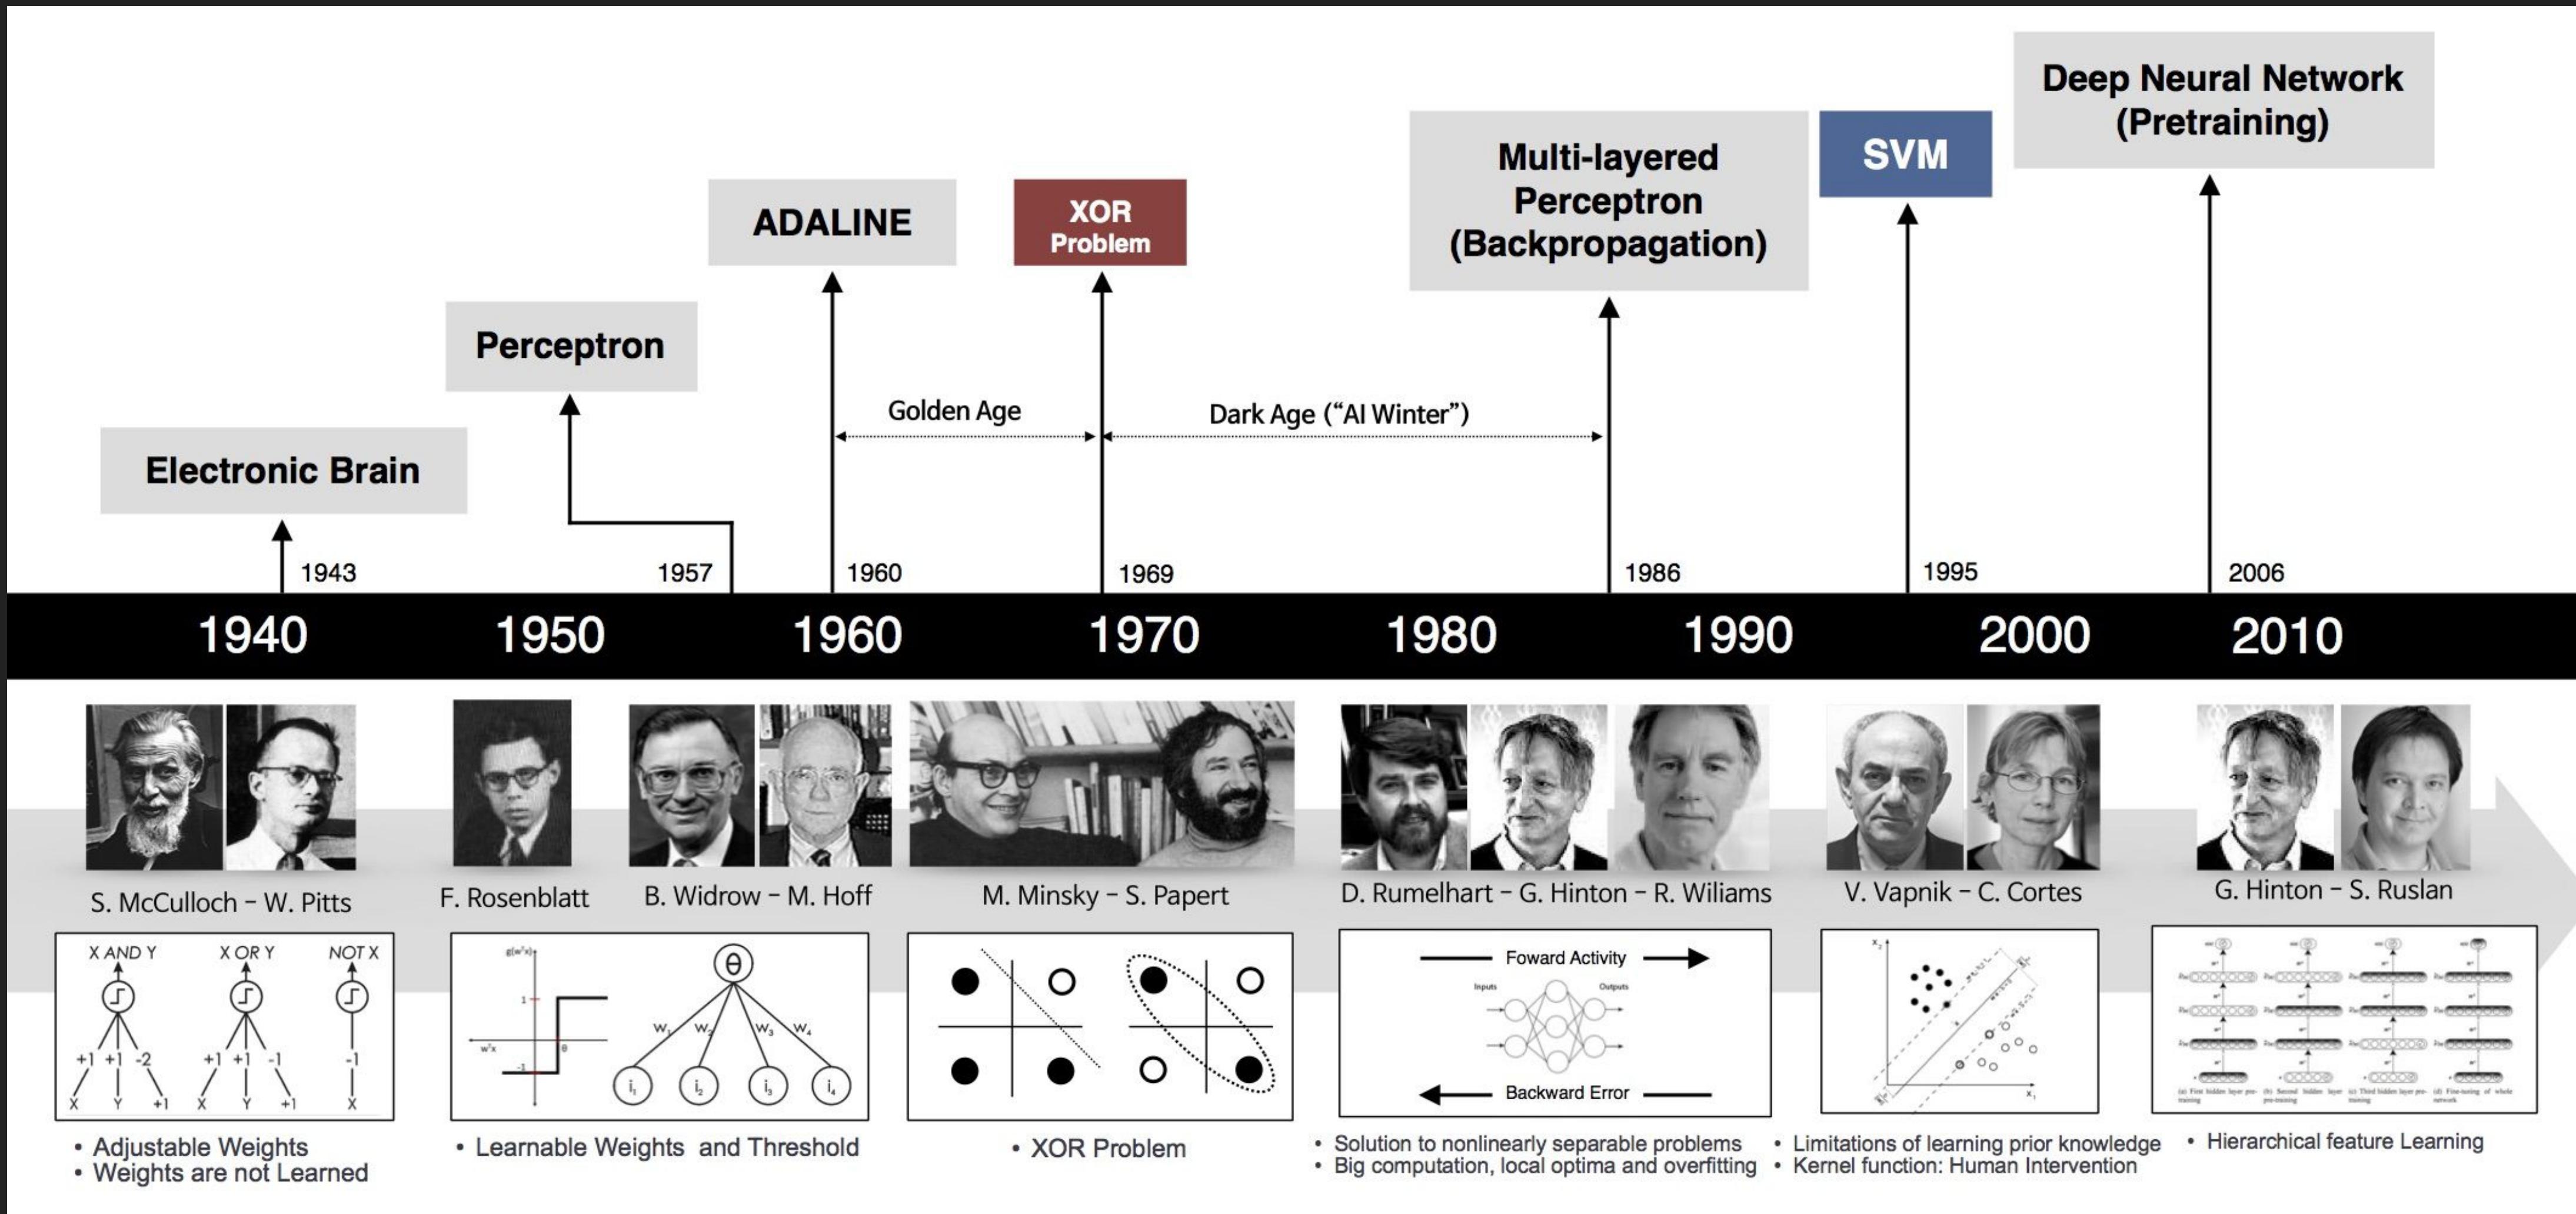

Meet the people who can coax treasure out of messy, unstructured data.
by Thomas H. Davenport and D.J. Patil

When Jonathan Goldman arrived for work in June 2006 at LinkedIn, the business networking site, the place still felt like a start-up. The company had just under 8 million accounts, and the number was growing quickly as existing members invited their friends and colleagues to join. But users weren't seeking out connections with the people who were already on the site at the rate executives had expected. Something was apparently missing in the social experience. As one LinkedIn manager put it, "It was like arriving at a conference reception and realizing you don't know anyone. So you just stand in the corner sipping your drink—and you probably leave early."

WHAT ELSE?

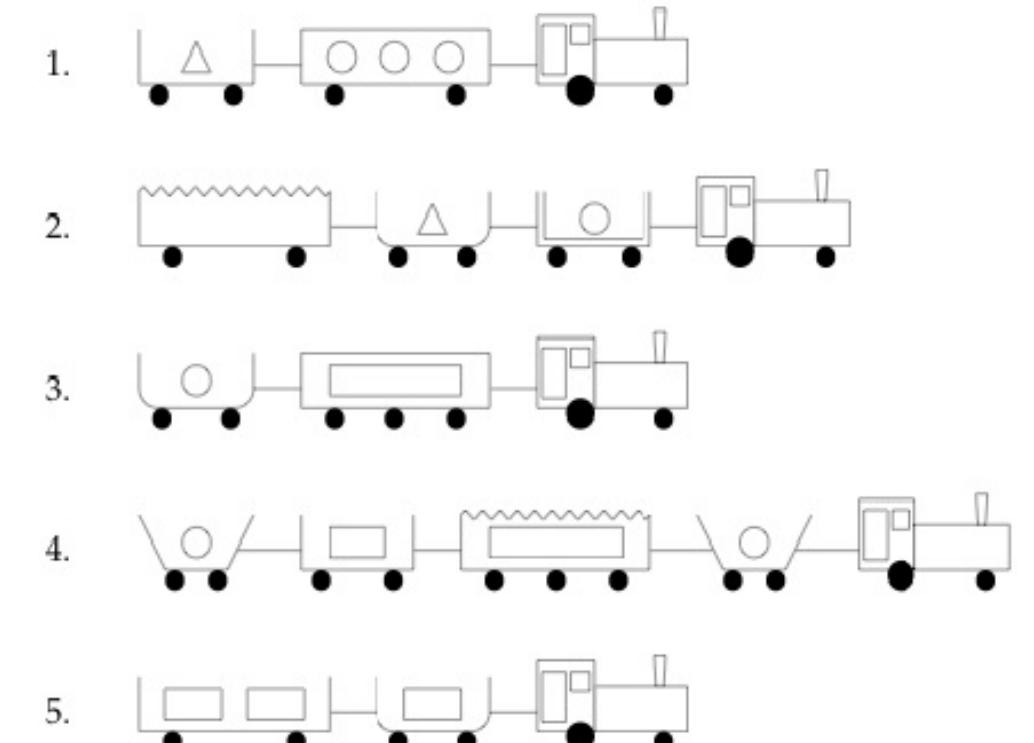

HOW TO BUILD A CLASSIFIER

- ▶ Michalsky trains
 - ▶ train goes east or west?
 - ▶ features
 - ▶ human palatable
 - ▶ language bias
 - ▶ the space of solutions is discrete
 - ▶ lacks smoothness
 - ▶ Useful, but...

1. TRAINS GOING EAST

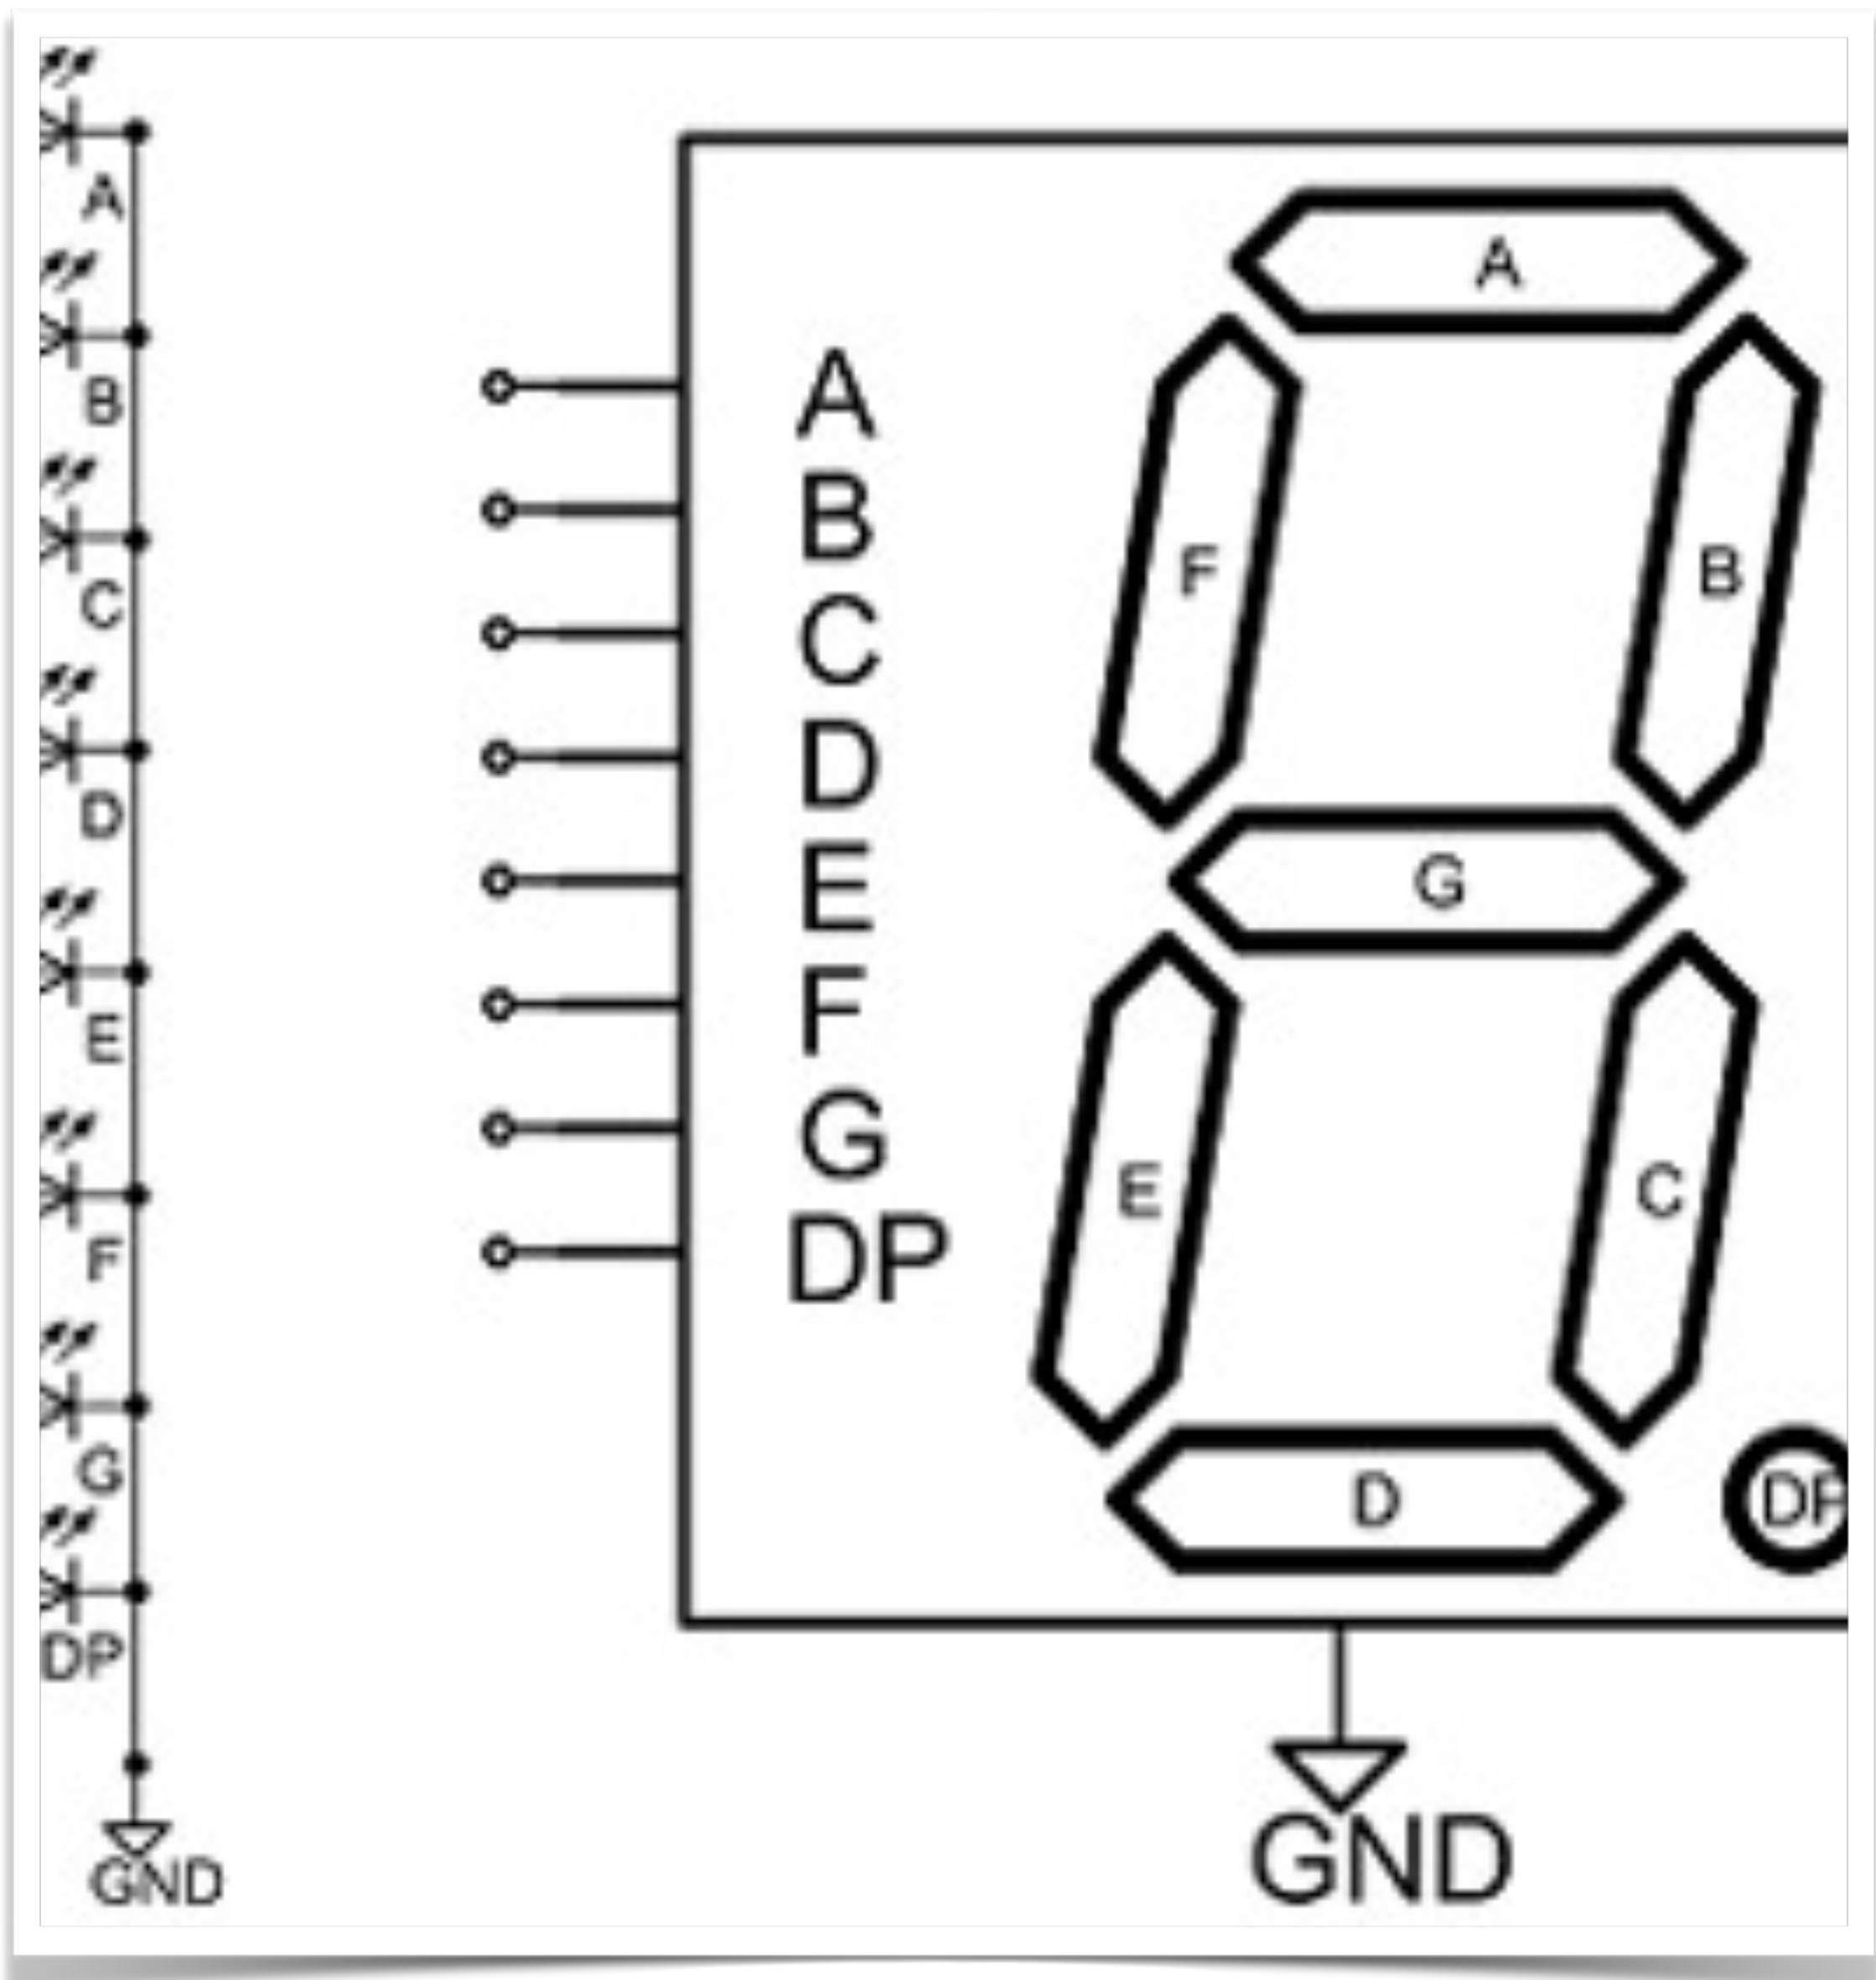

2. TRAINS GOING WEST

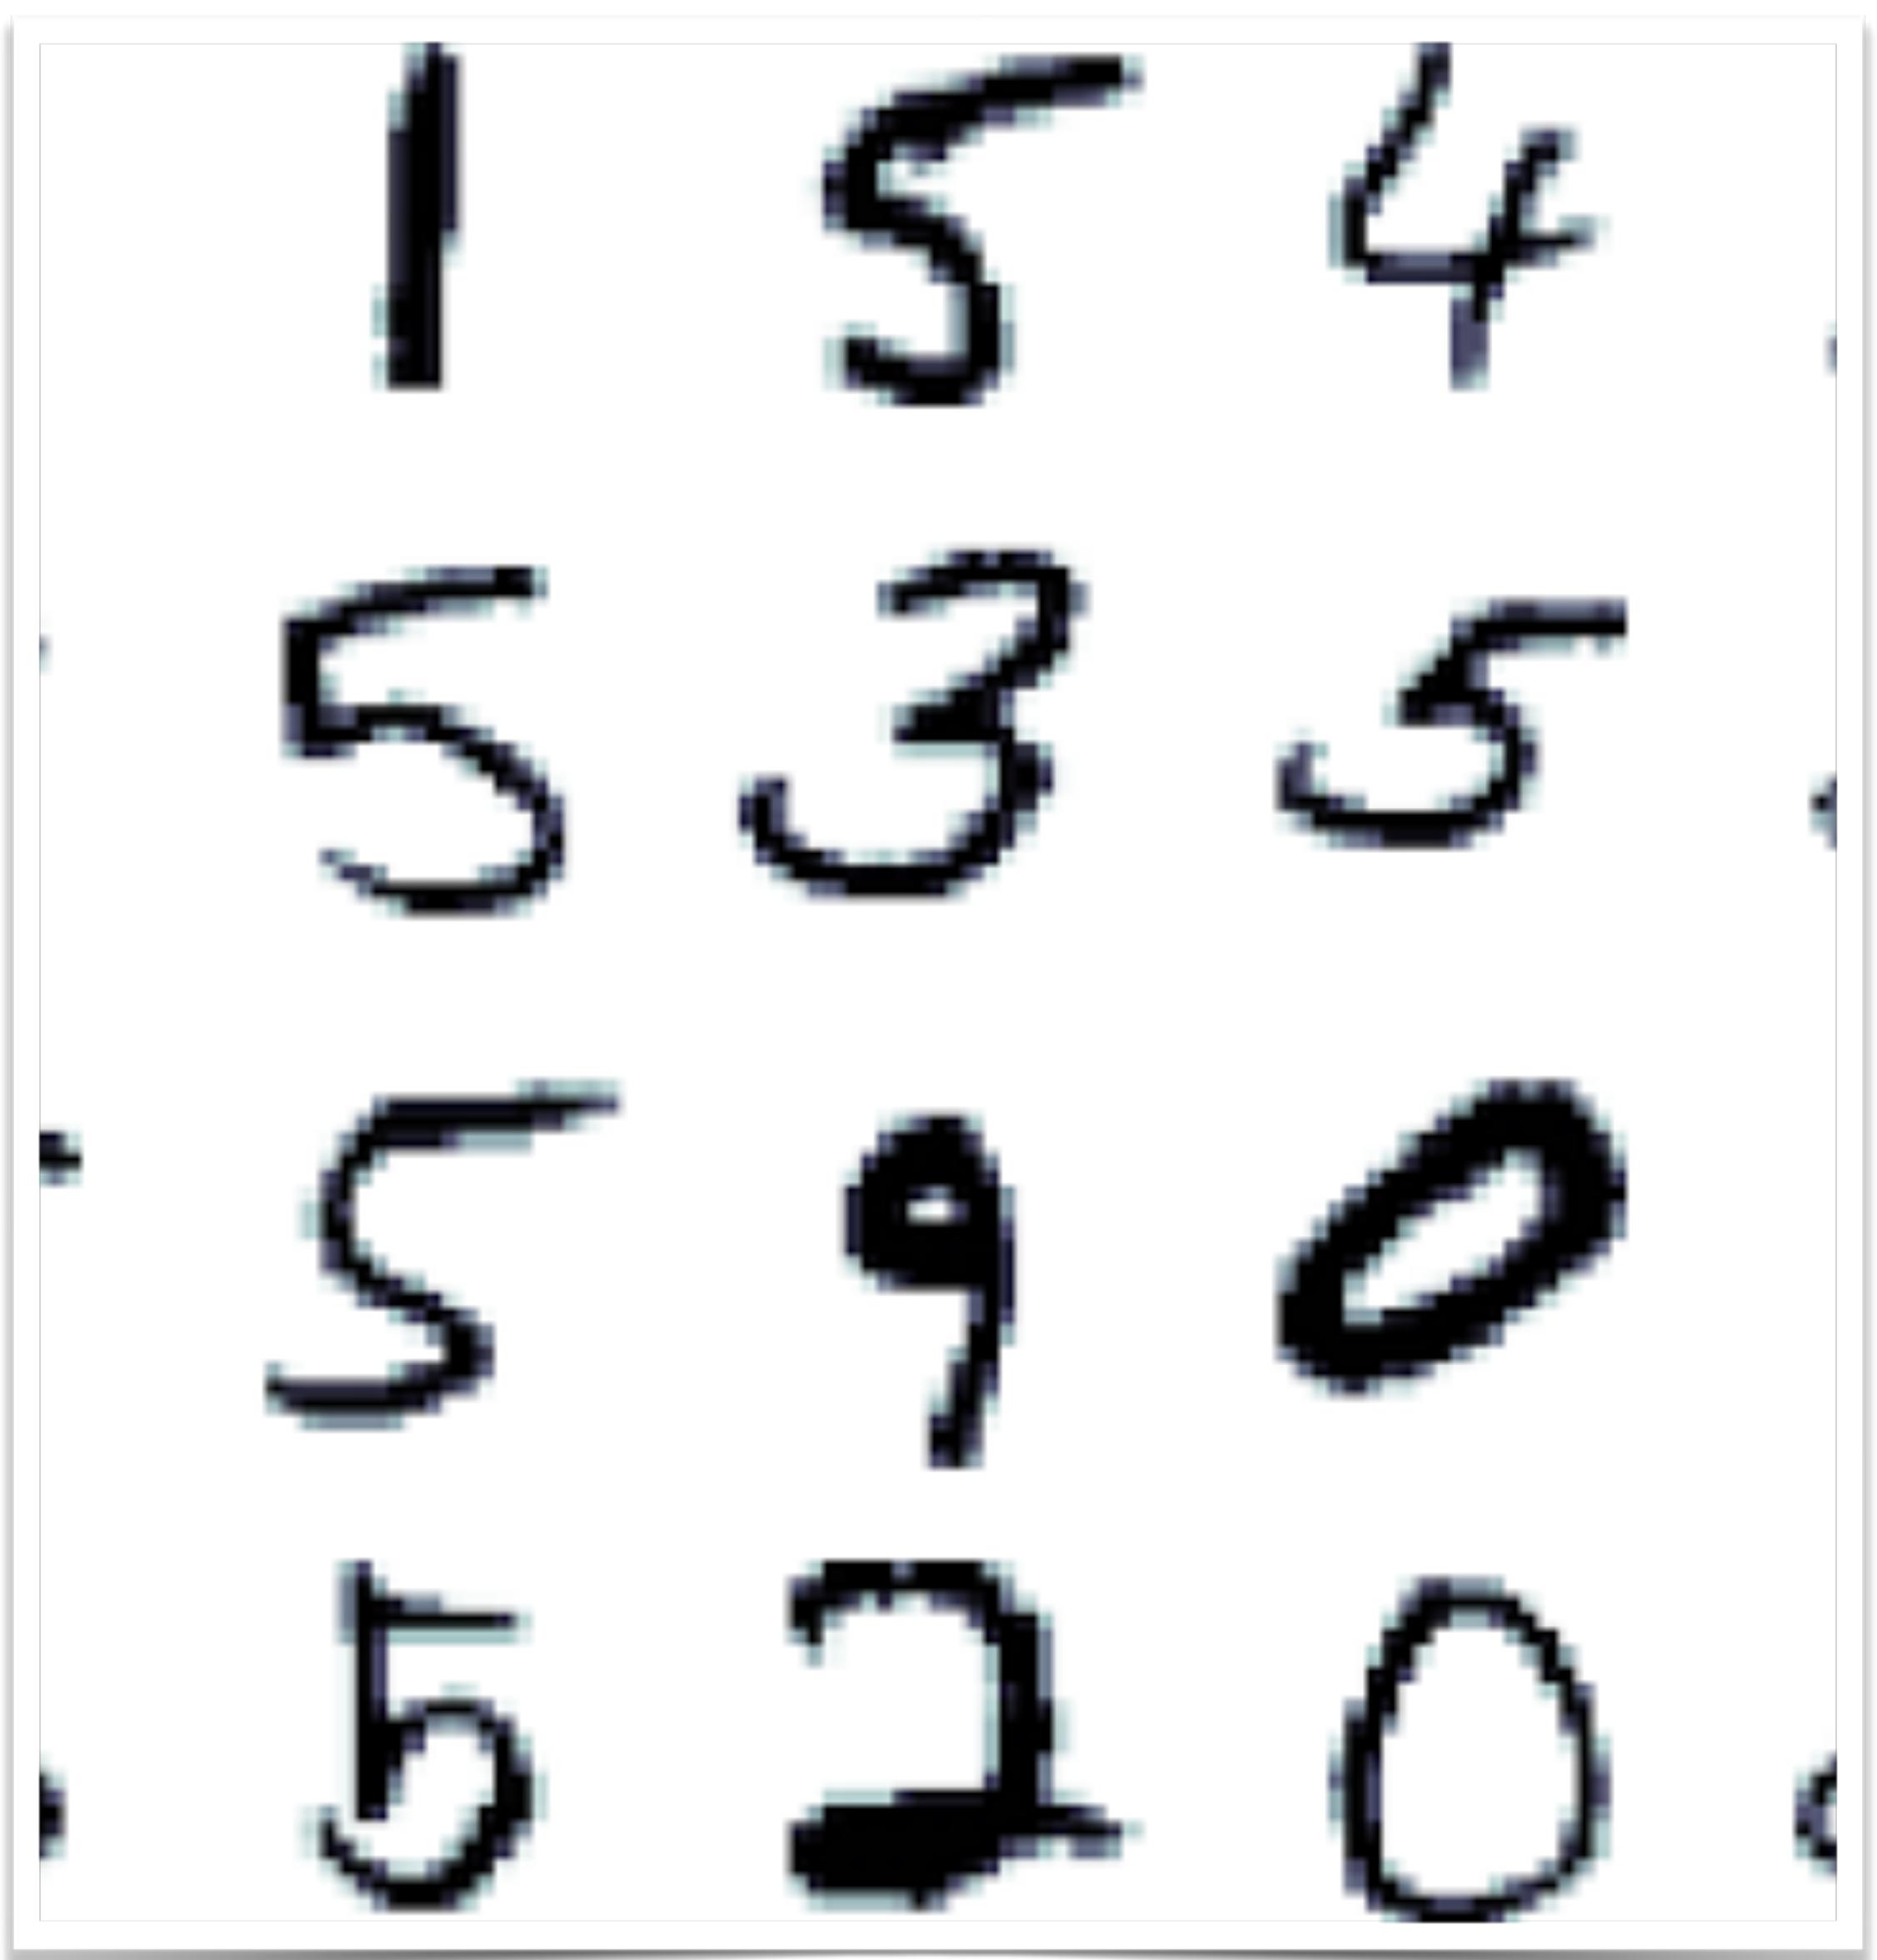

CLASSIFYING DIGITS

- ▶ Seven segments
 - ▶ Decision tree, SVM, MLP
- ▶ Feature Engineering
 - ▶ Human bottleneck
- ▶ Knowledge
 - ▶ Injected by humans
 - ▶ Hard to convey

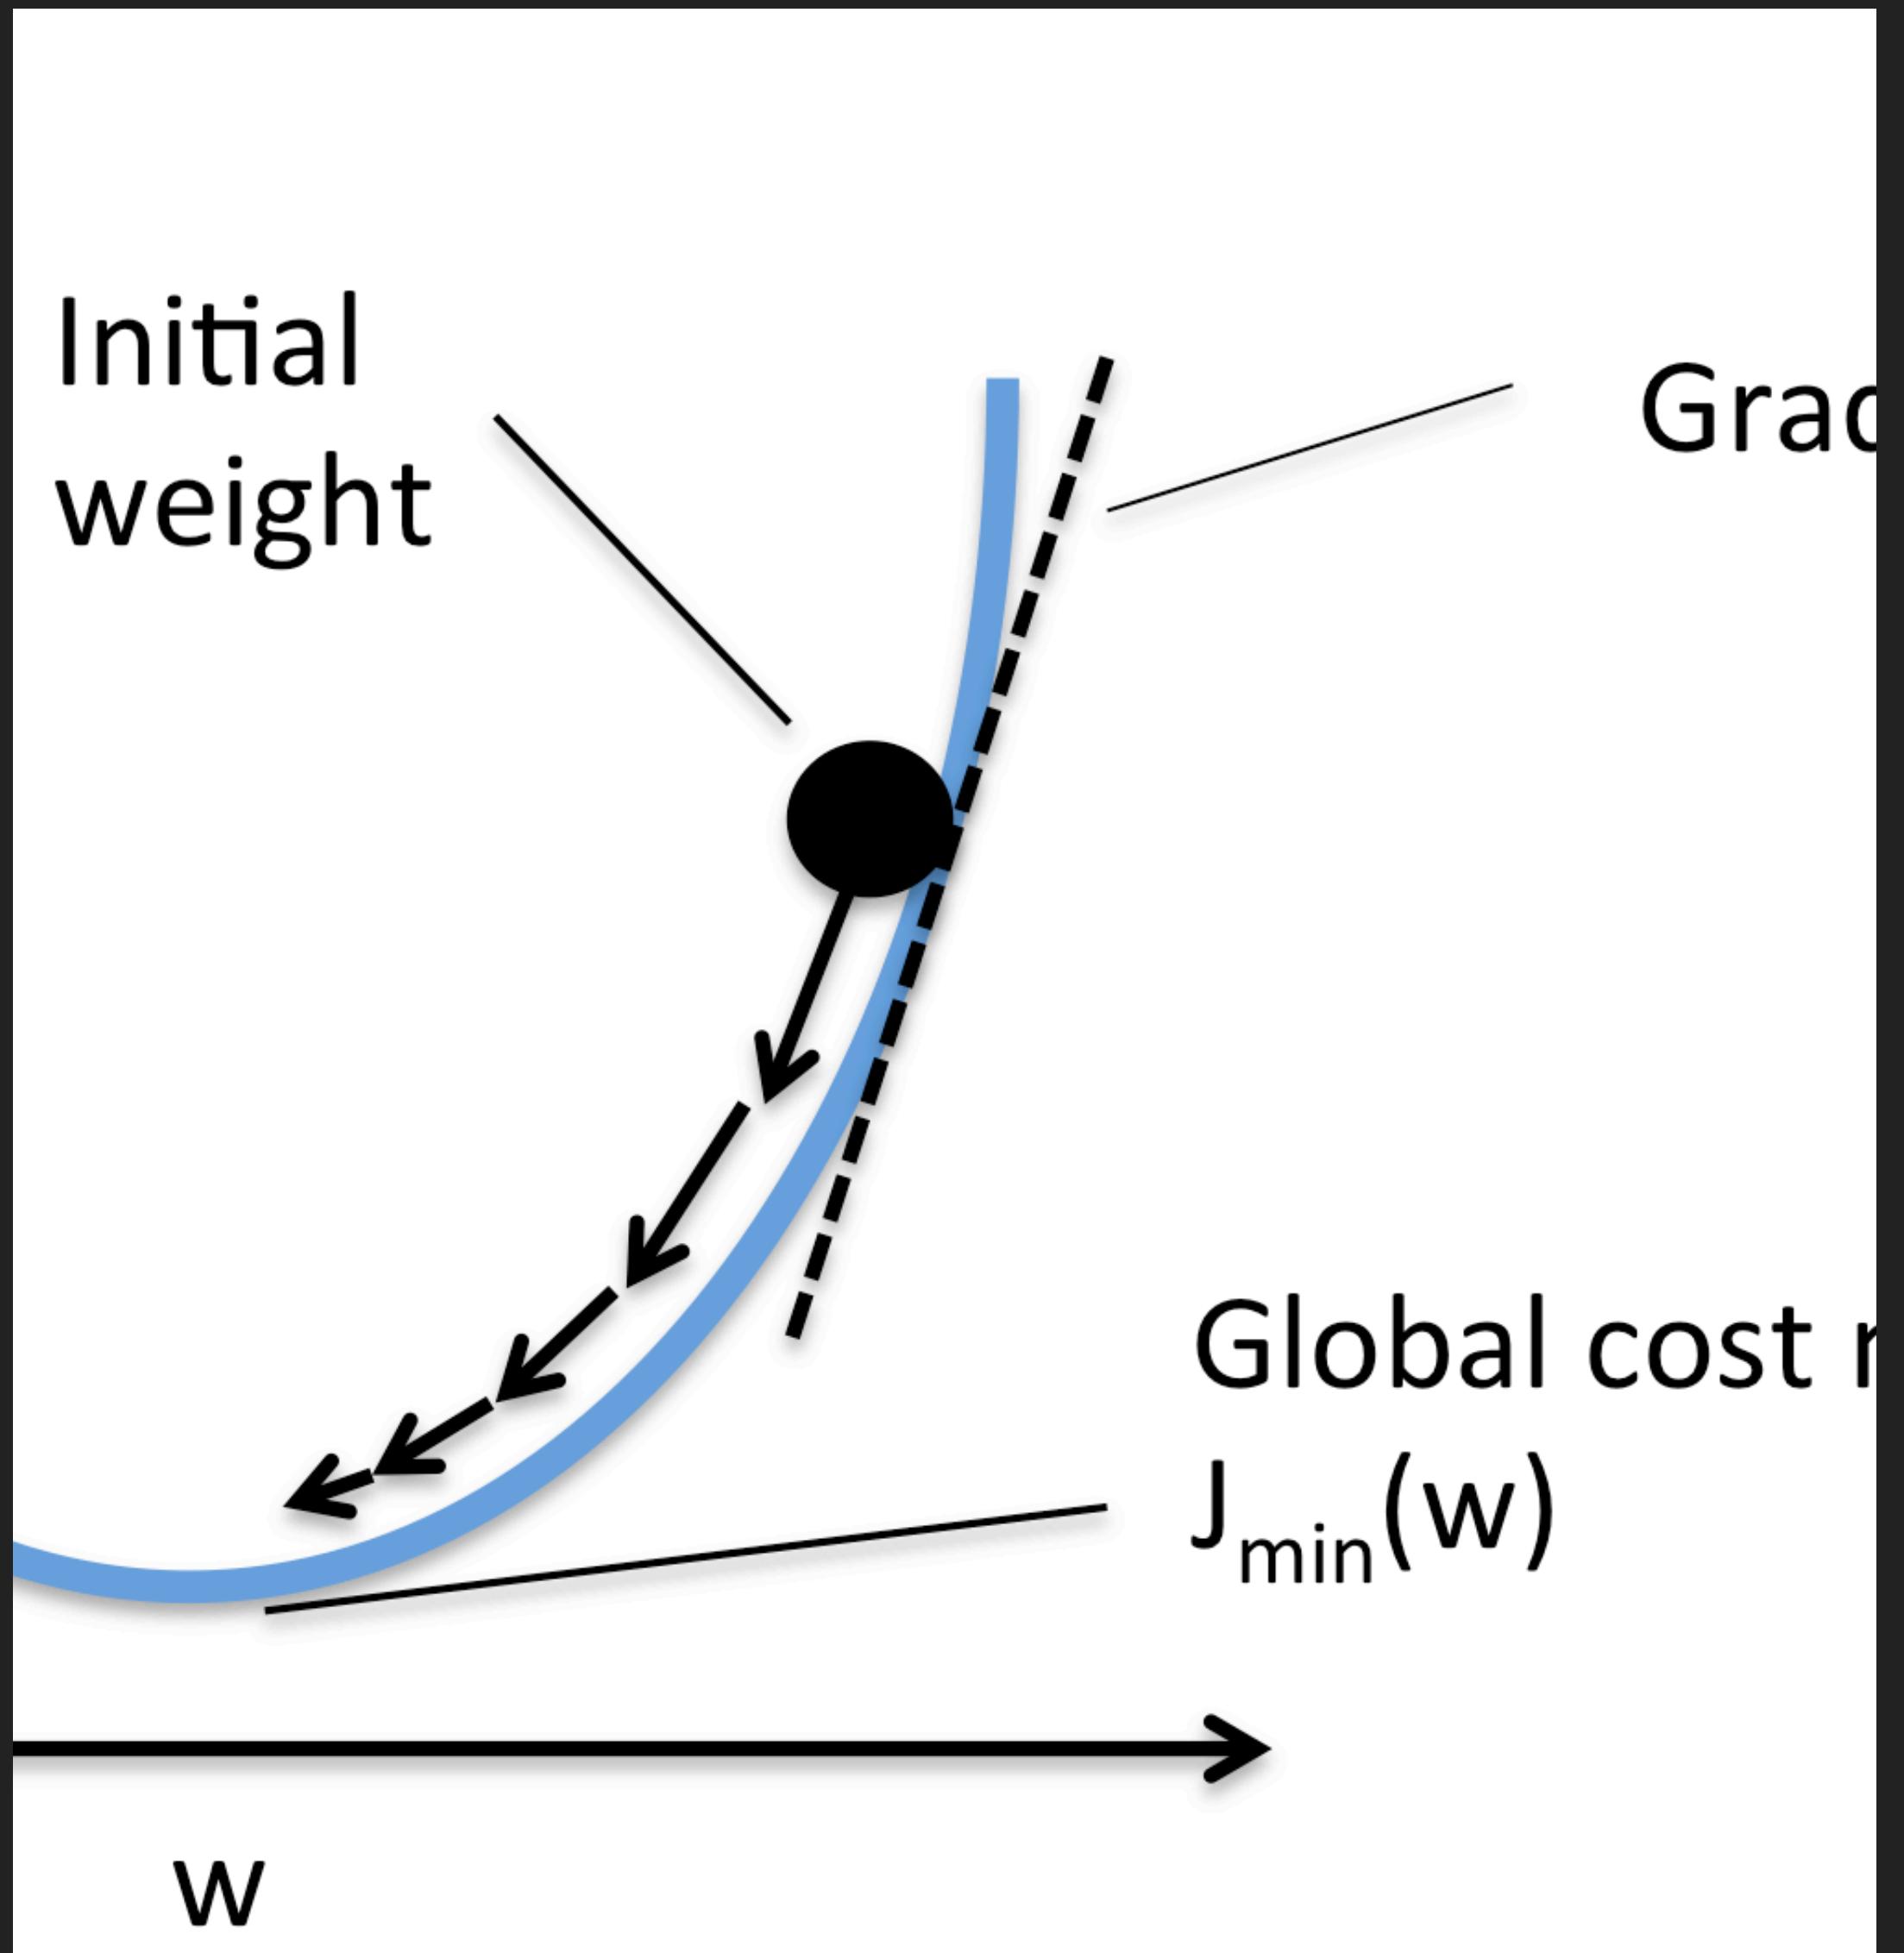

CLASSIFYING DIGITS

- ▶ Images
 - ▶ presented raw
- ▶ “Deep” Neural Network
 - ▶ Convolutional Neural Net
 - ▶ Learns representation
- ▶ No engineering?
- ▶ Artificial perception

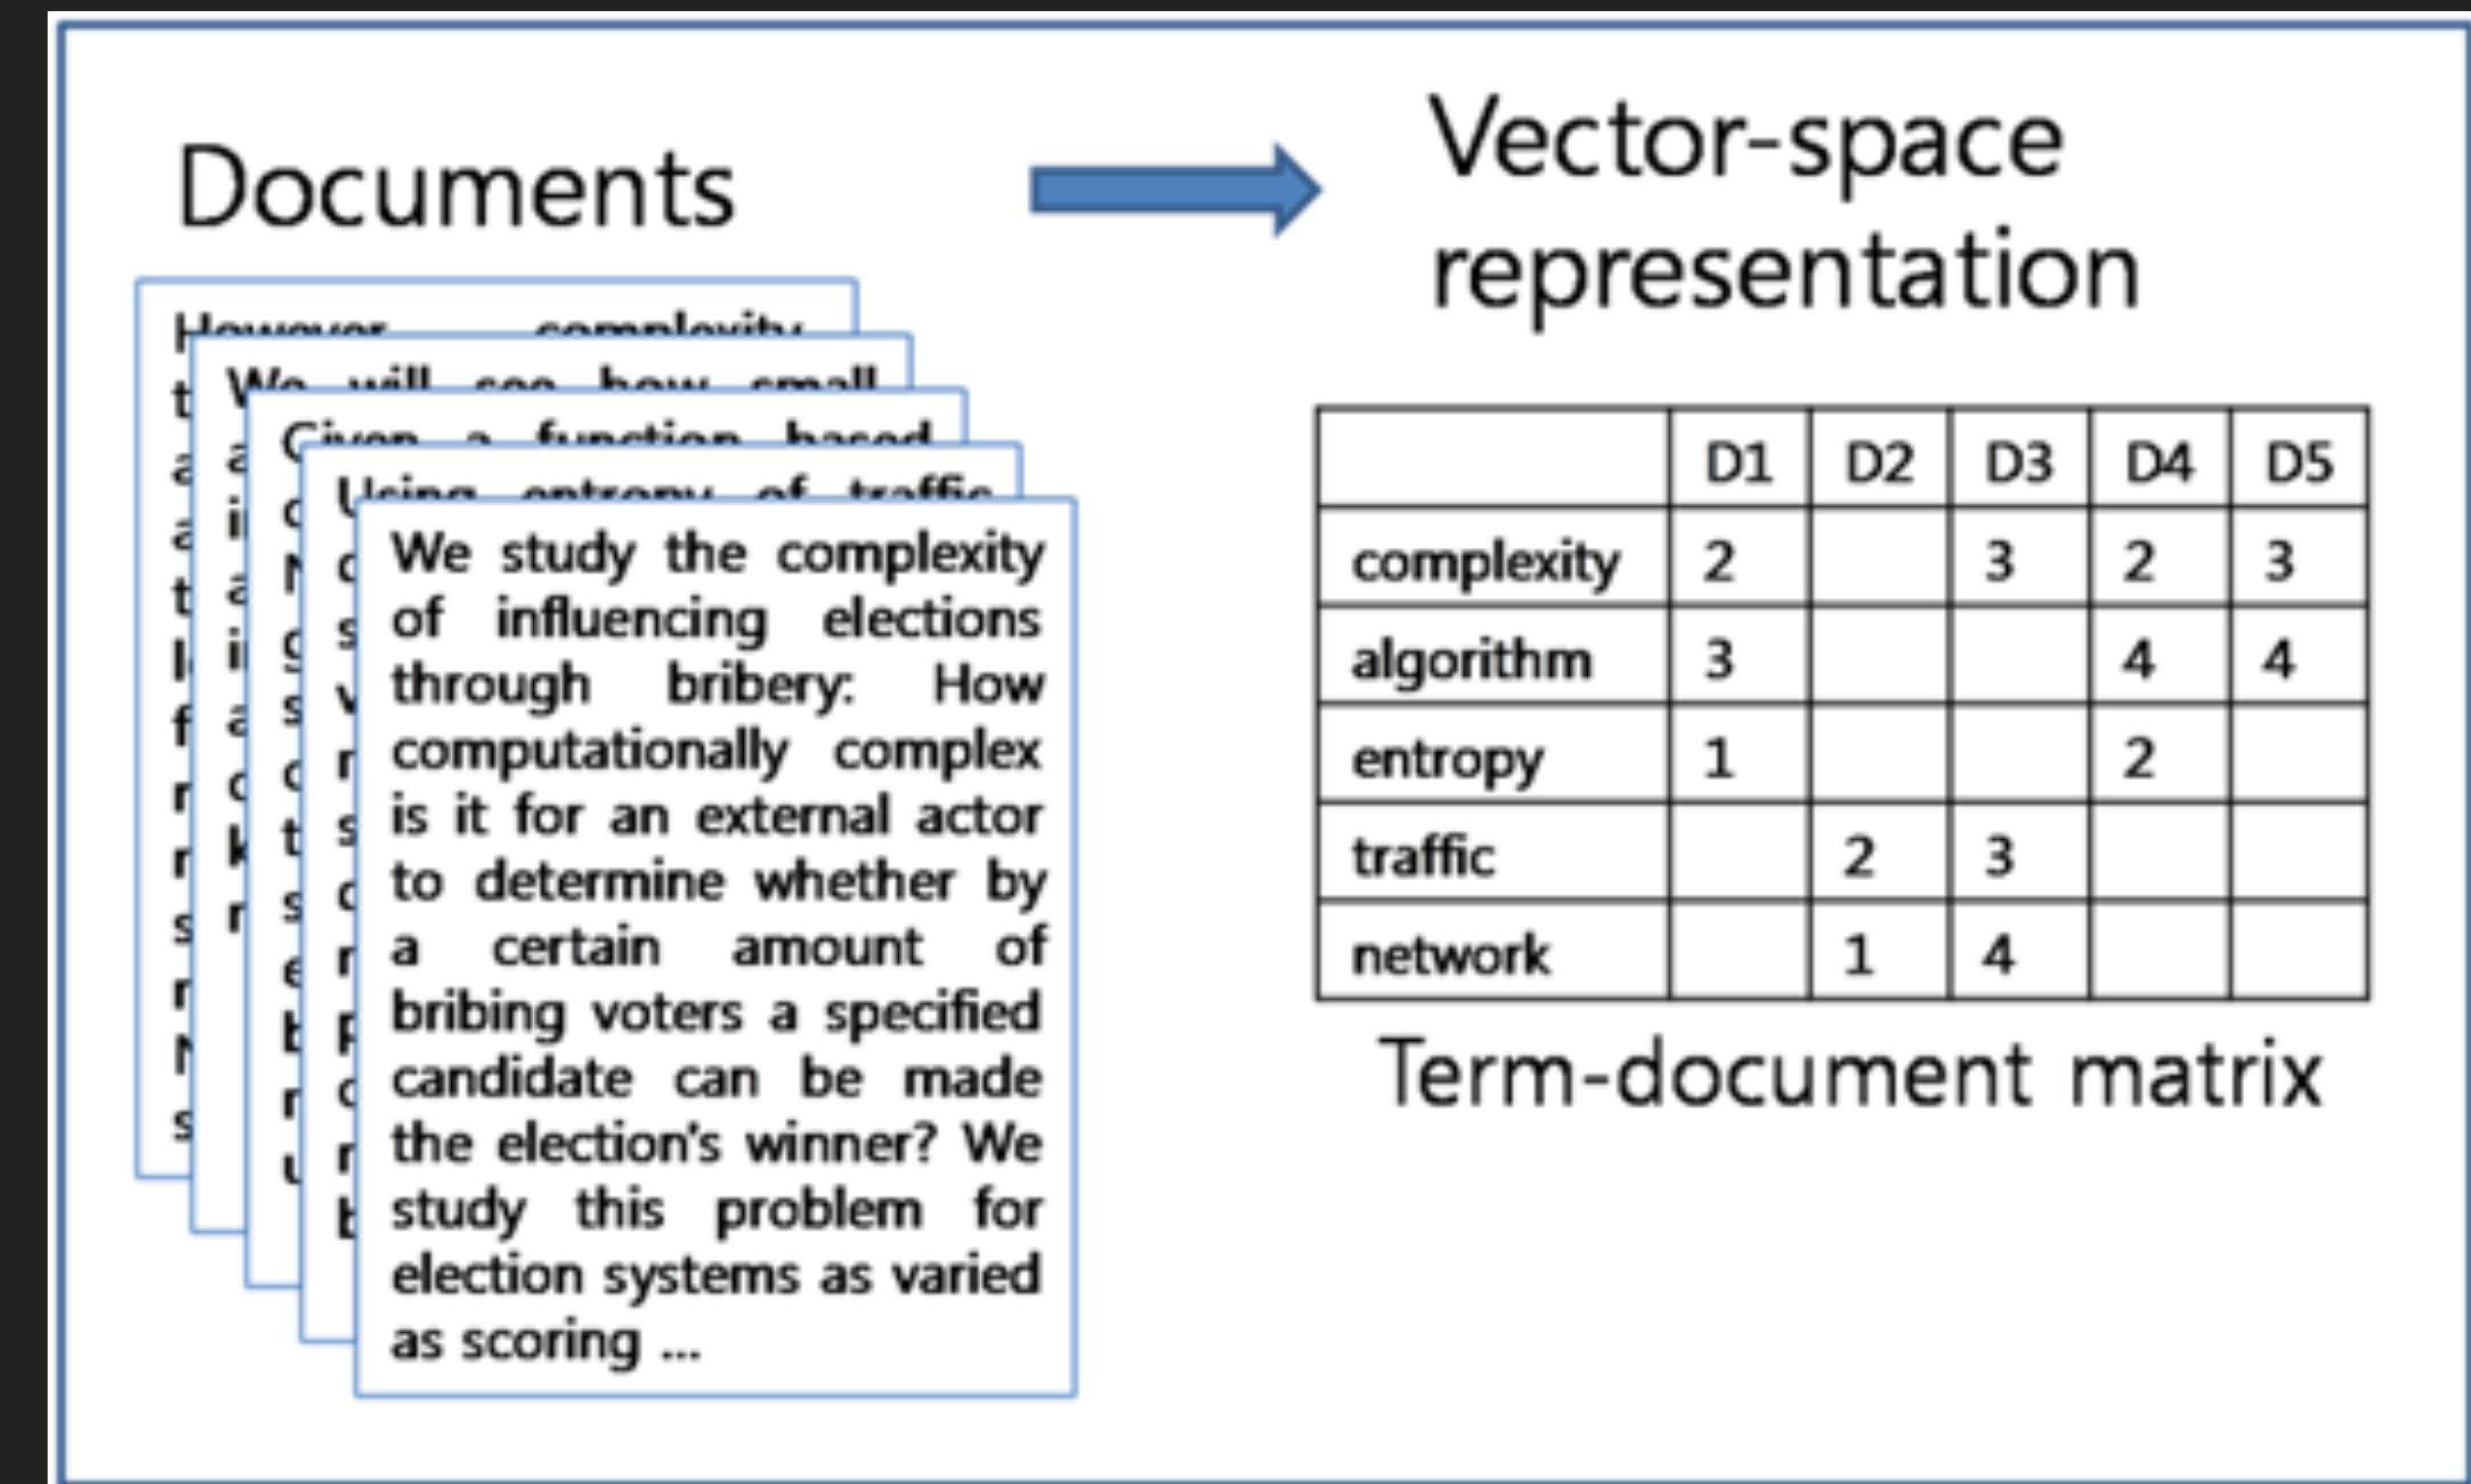

UNBLOCKING AI (ACTUALLY, MACHINE LEARNING)

- ▶ Search space
 - ▶ discrete vs continuous
- ▶ Features
 - ▶ engineered vs raw
 - ▶ approximate vs “optimal”
 - ▶ learned to the task

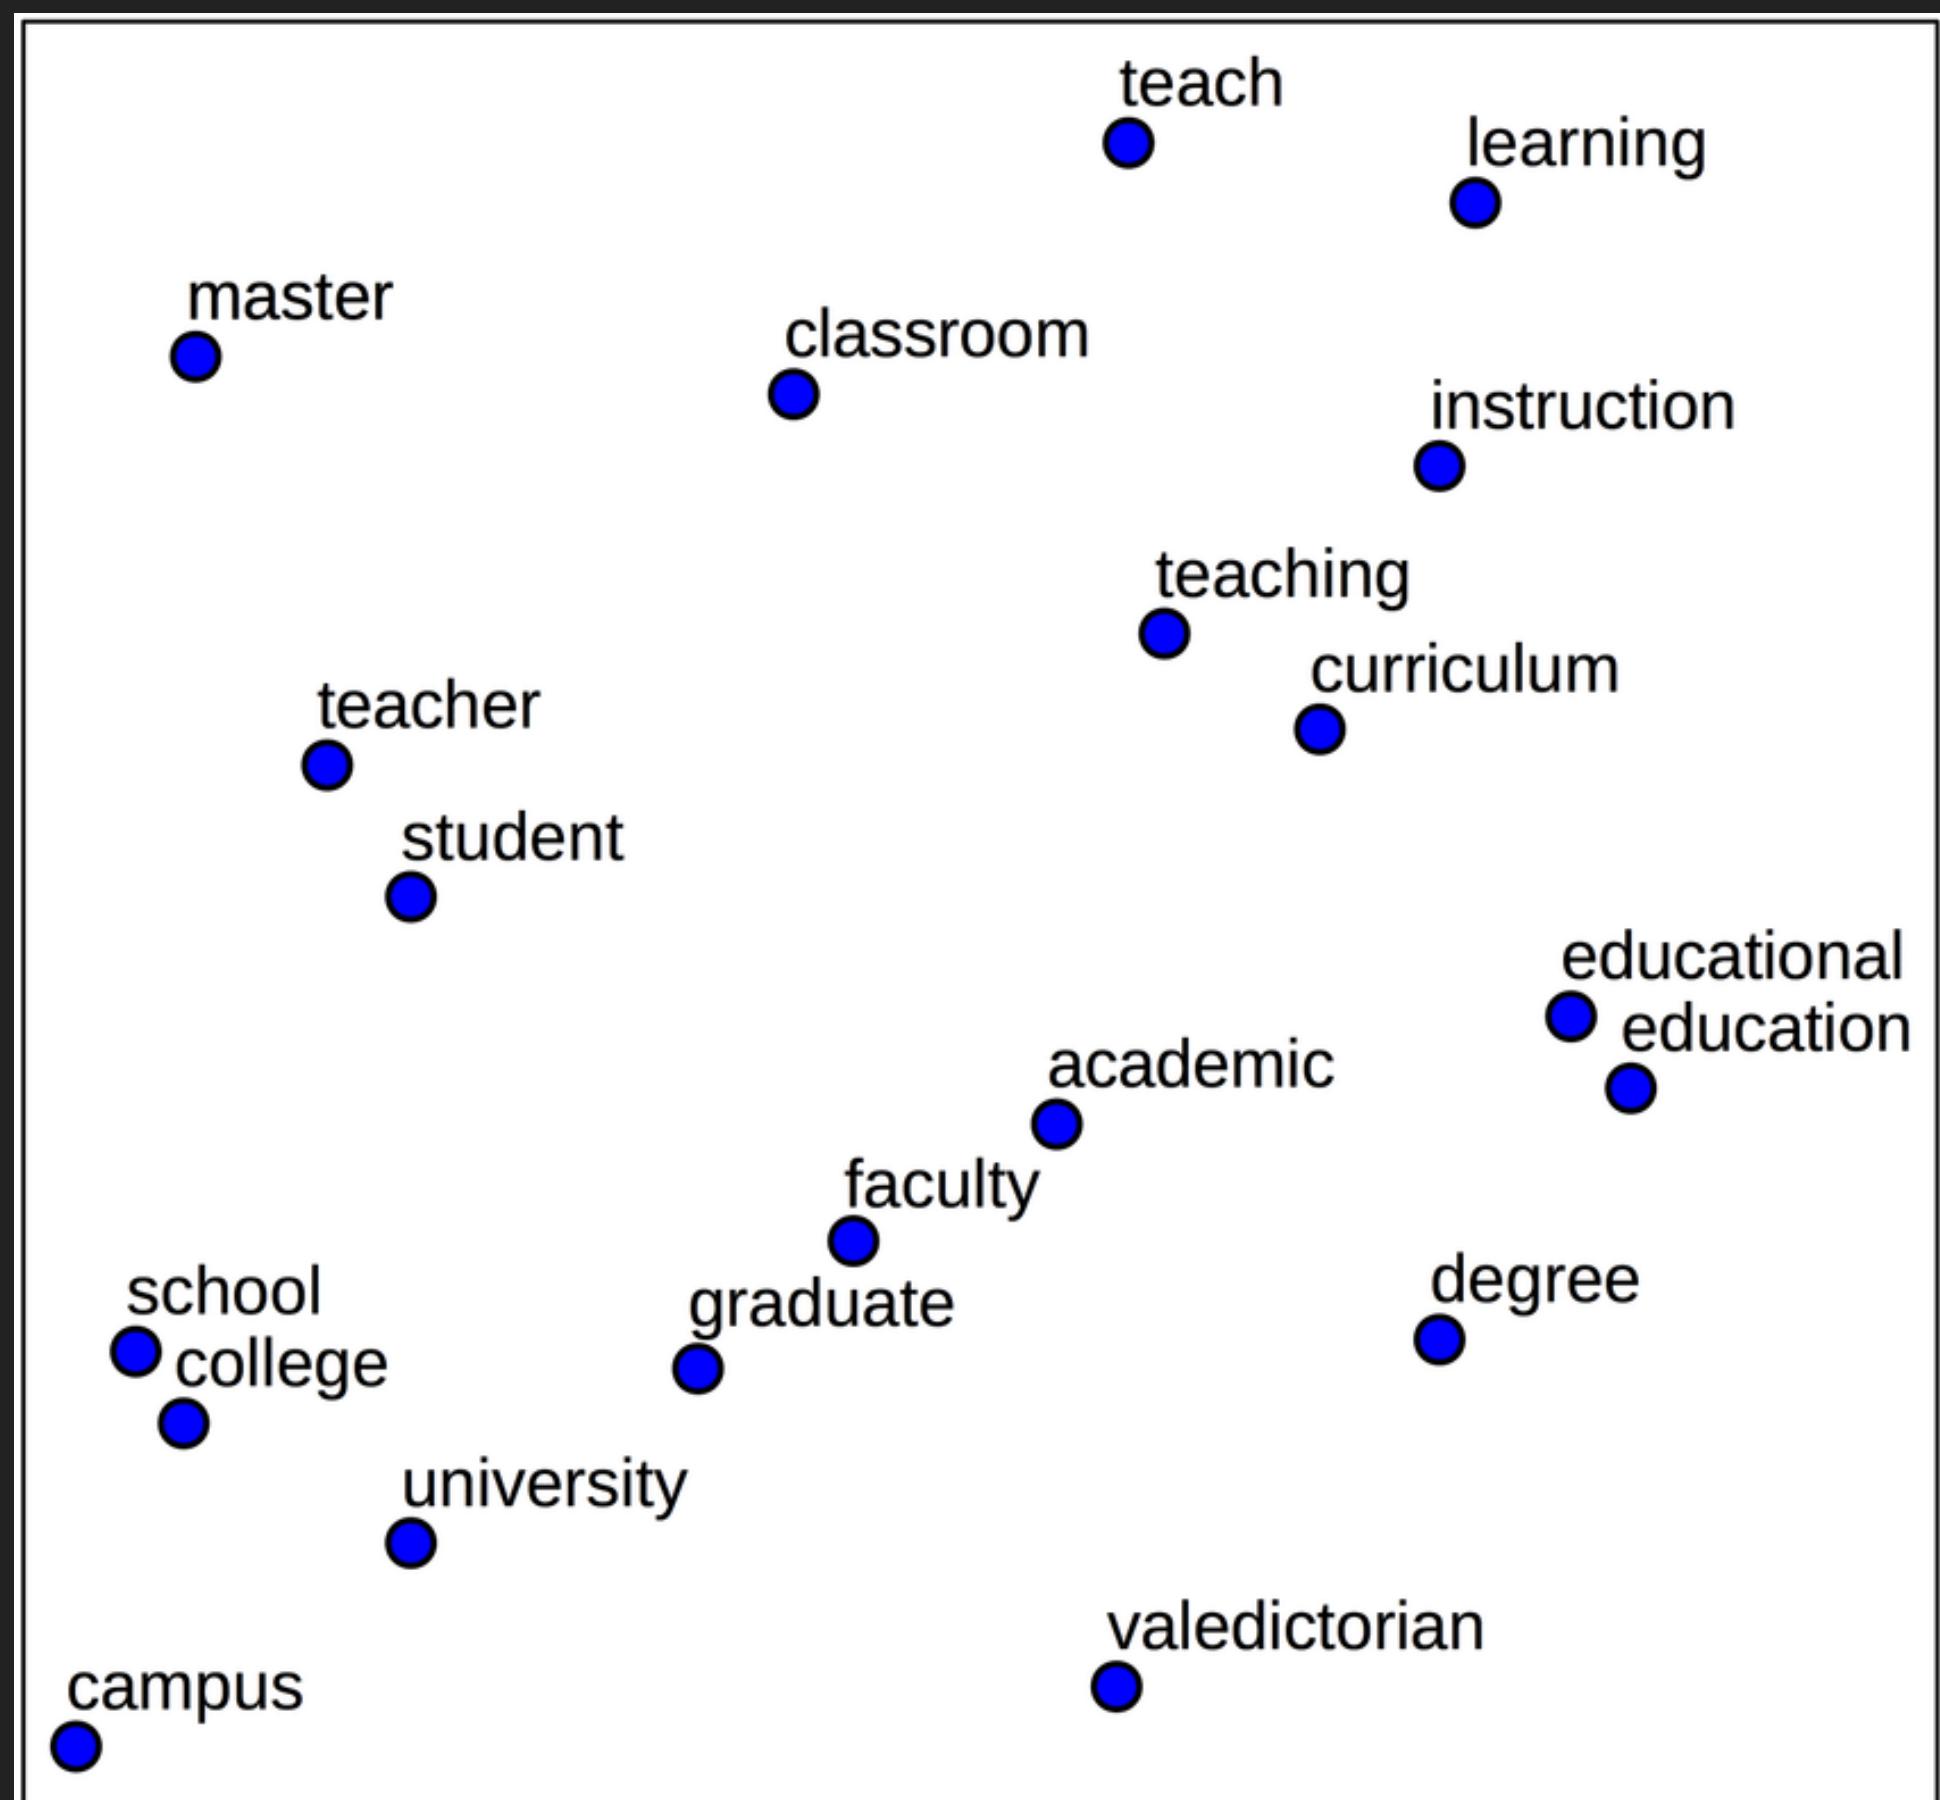

NLP / INFORMATION RETRIEVAL

- ▶ Vector representation
 - ▶ coded from text
 - ▶ TF-IDF
 - ▶ tens of thousands of dimensions
 - ▶ sparse, stiff, not smooth

NLP / INFORMATION RETRIEVAL

- ▶ Word embeddings / Neural language models
 - ▶ are **learned** not just coded
 - ▶ predict the next word in a _____
 - ▶ do not require (much) engineering
 - ▶ tens of dimensions do a good job
 - ▶ dense
 - ▶ continuous
 - ▶ enable semantic inference

NLP / INFORMATION RETRIEVAL

- ▶ BERT
 - ▶ Bidirectional Encoder Representations from Transformers
 - ▶ predicts “masked” words from context
 - ▶ learns a language model
 - ▶ can be used for multiple NLP tasks
 - ▶ NER, sentiment identification, translation
 - ▶ Applicable to sequences

RECOMMENDATION

- ▶ Natural representation
- ▶ A user is a vector of size #items
- ▶ Sparse, hard to relate, ...

USER	ITEM
1	A
1	B
1	G
2	A
2	C
3	B
3	G
3	F
3	I
4	B
4	C
5	G
5	F
5	I
5	J
6	A
6	C

	A	B	C	F	G	I	J
1	1	1	0	0	1	0	0
2	1	0	1	0	0	0	0
3	0	1	0	1	1	1	0
4	0	1	1	0	0	0	0
5	0	0	0	1	1	1	1
6	1	0	1	0	0	0	0

RECOMMENDATION

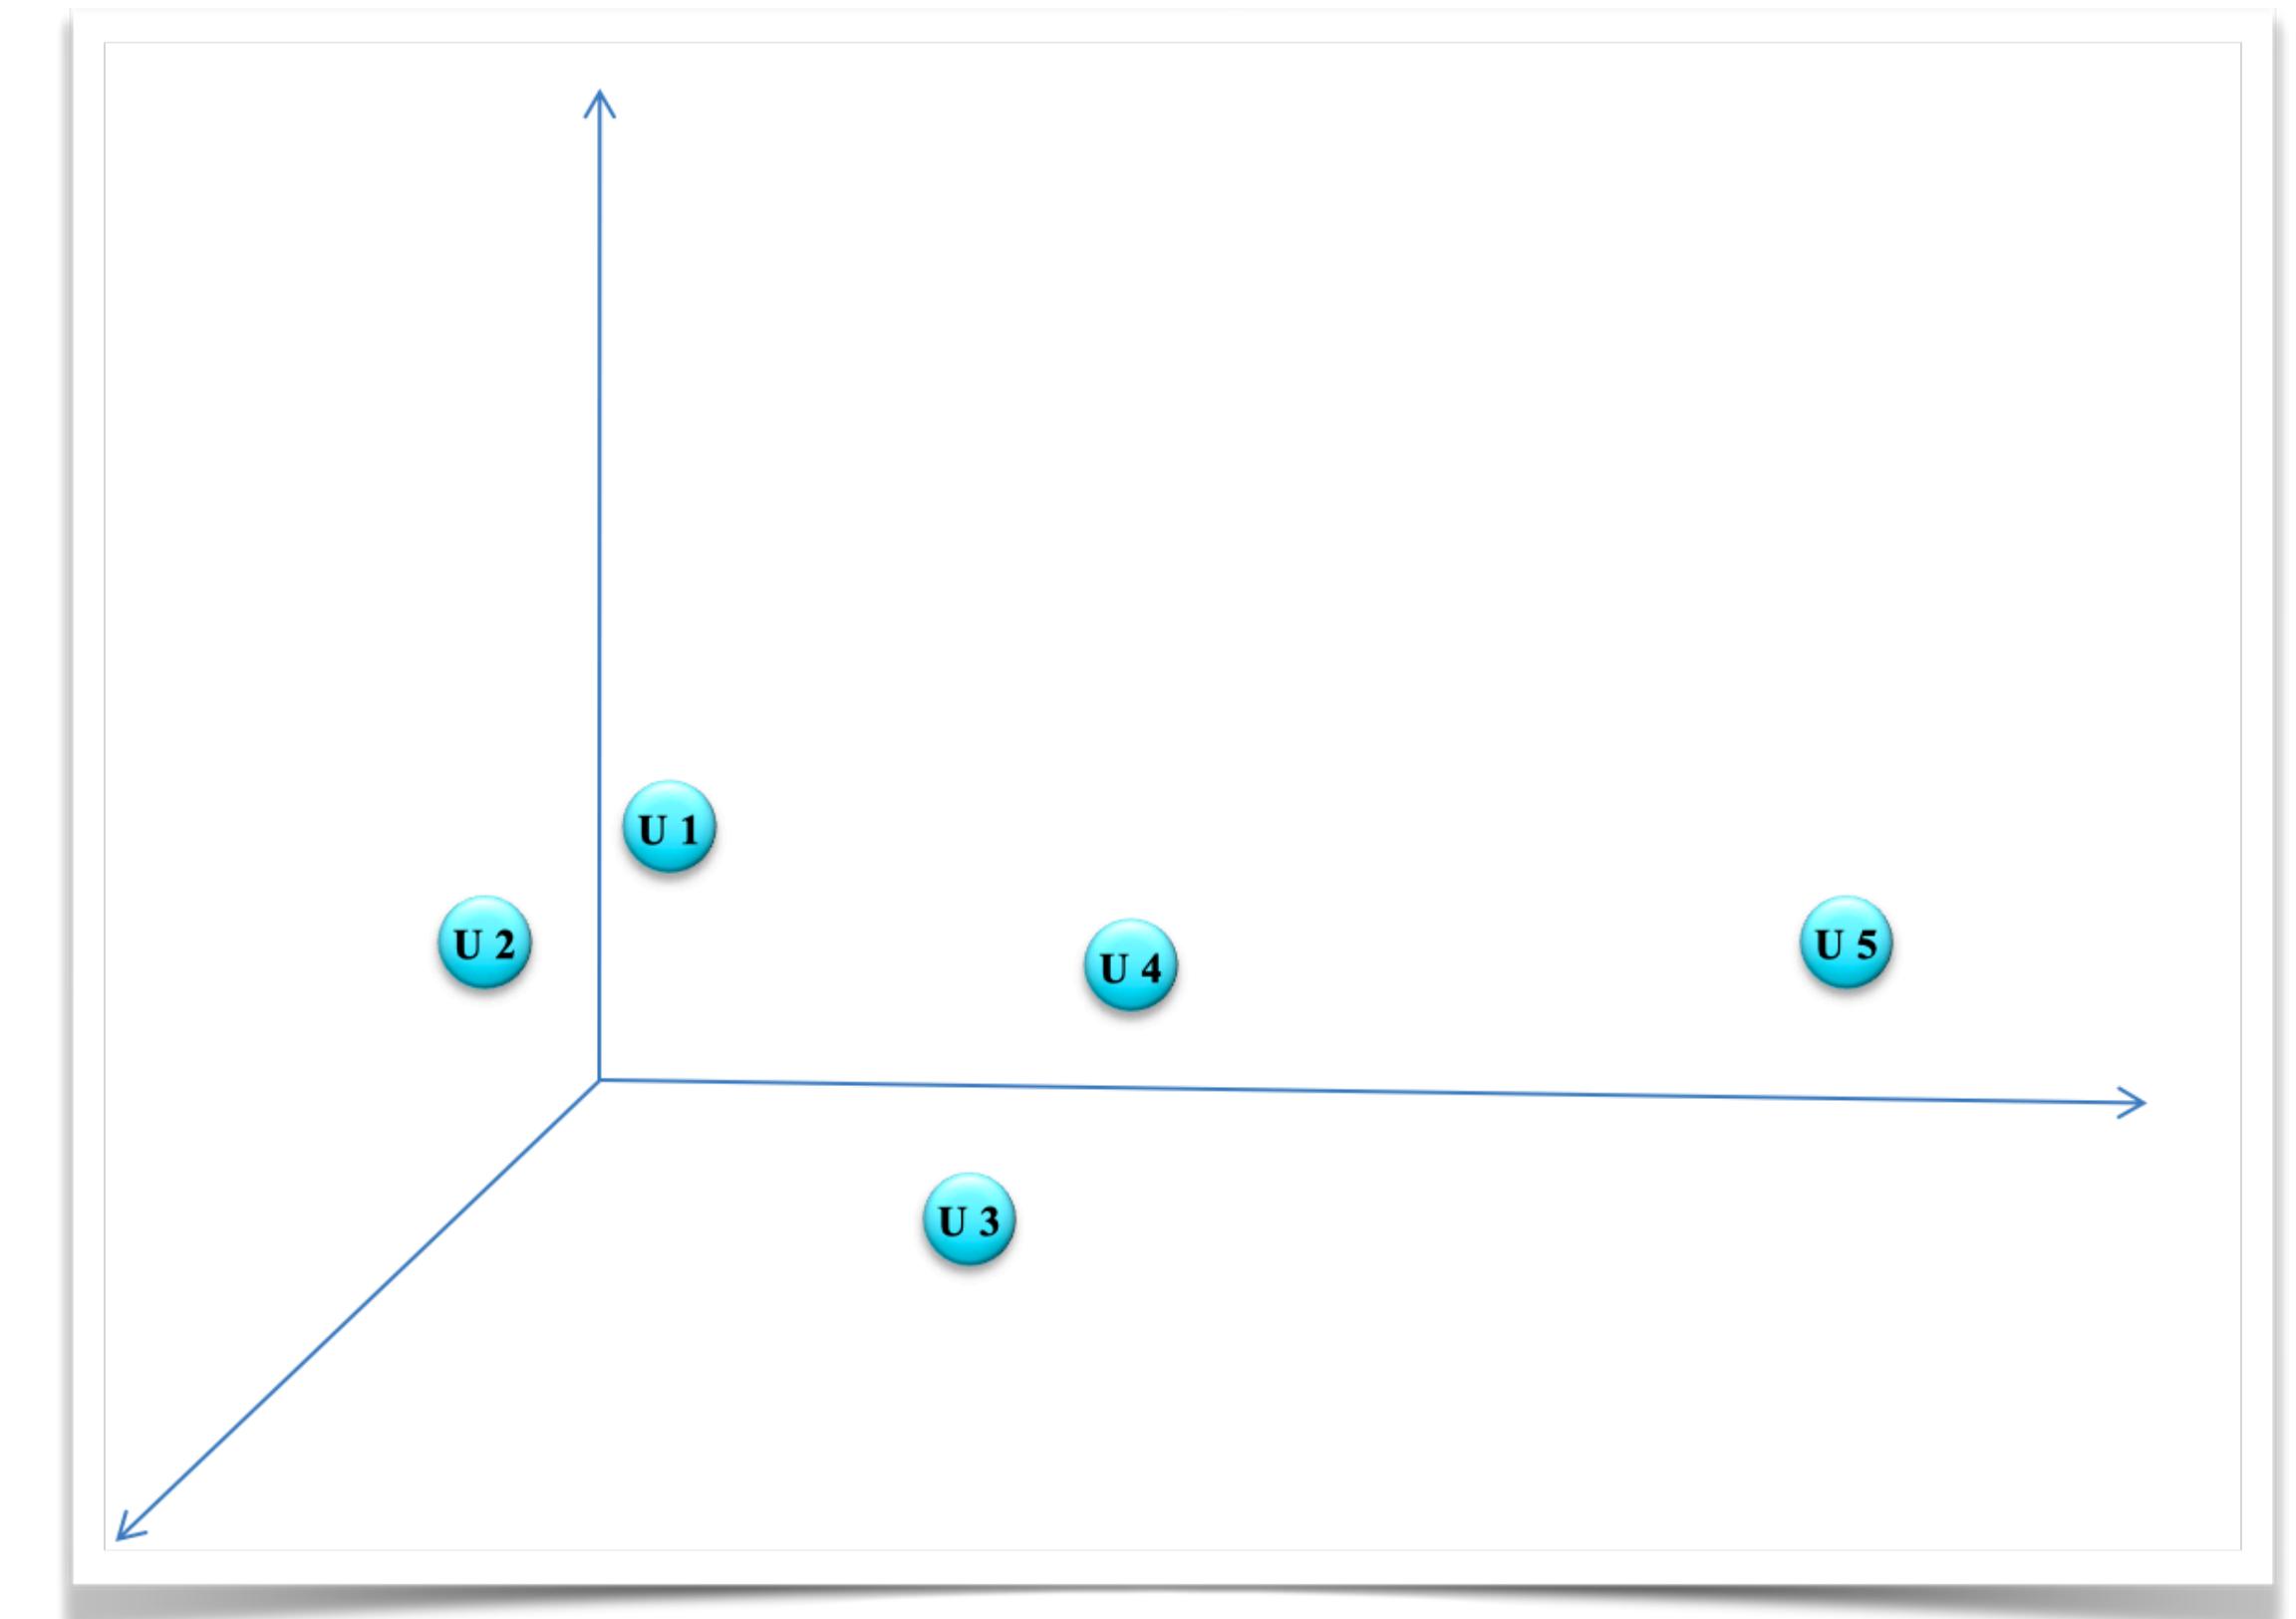

- ▶ Using association rules
 - ▶ recommendations very easy to understand
 - ▶ fixed representation
 - ▶ uniqueness and unrelatedness of items and users
- ▶ low support
- ▶ hard to see a bigger picture

	A	B	C	F	G	I	J
1	1	1	0	0	1	0	0
2	1	0	1	0	0	0	0
3	0	1	0	1	1	1	0
4	0	1	1	0	0	0	0
5	0	0	0	1	1	1	1
6	1	0	1	0	0	0	0

A & B → G

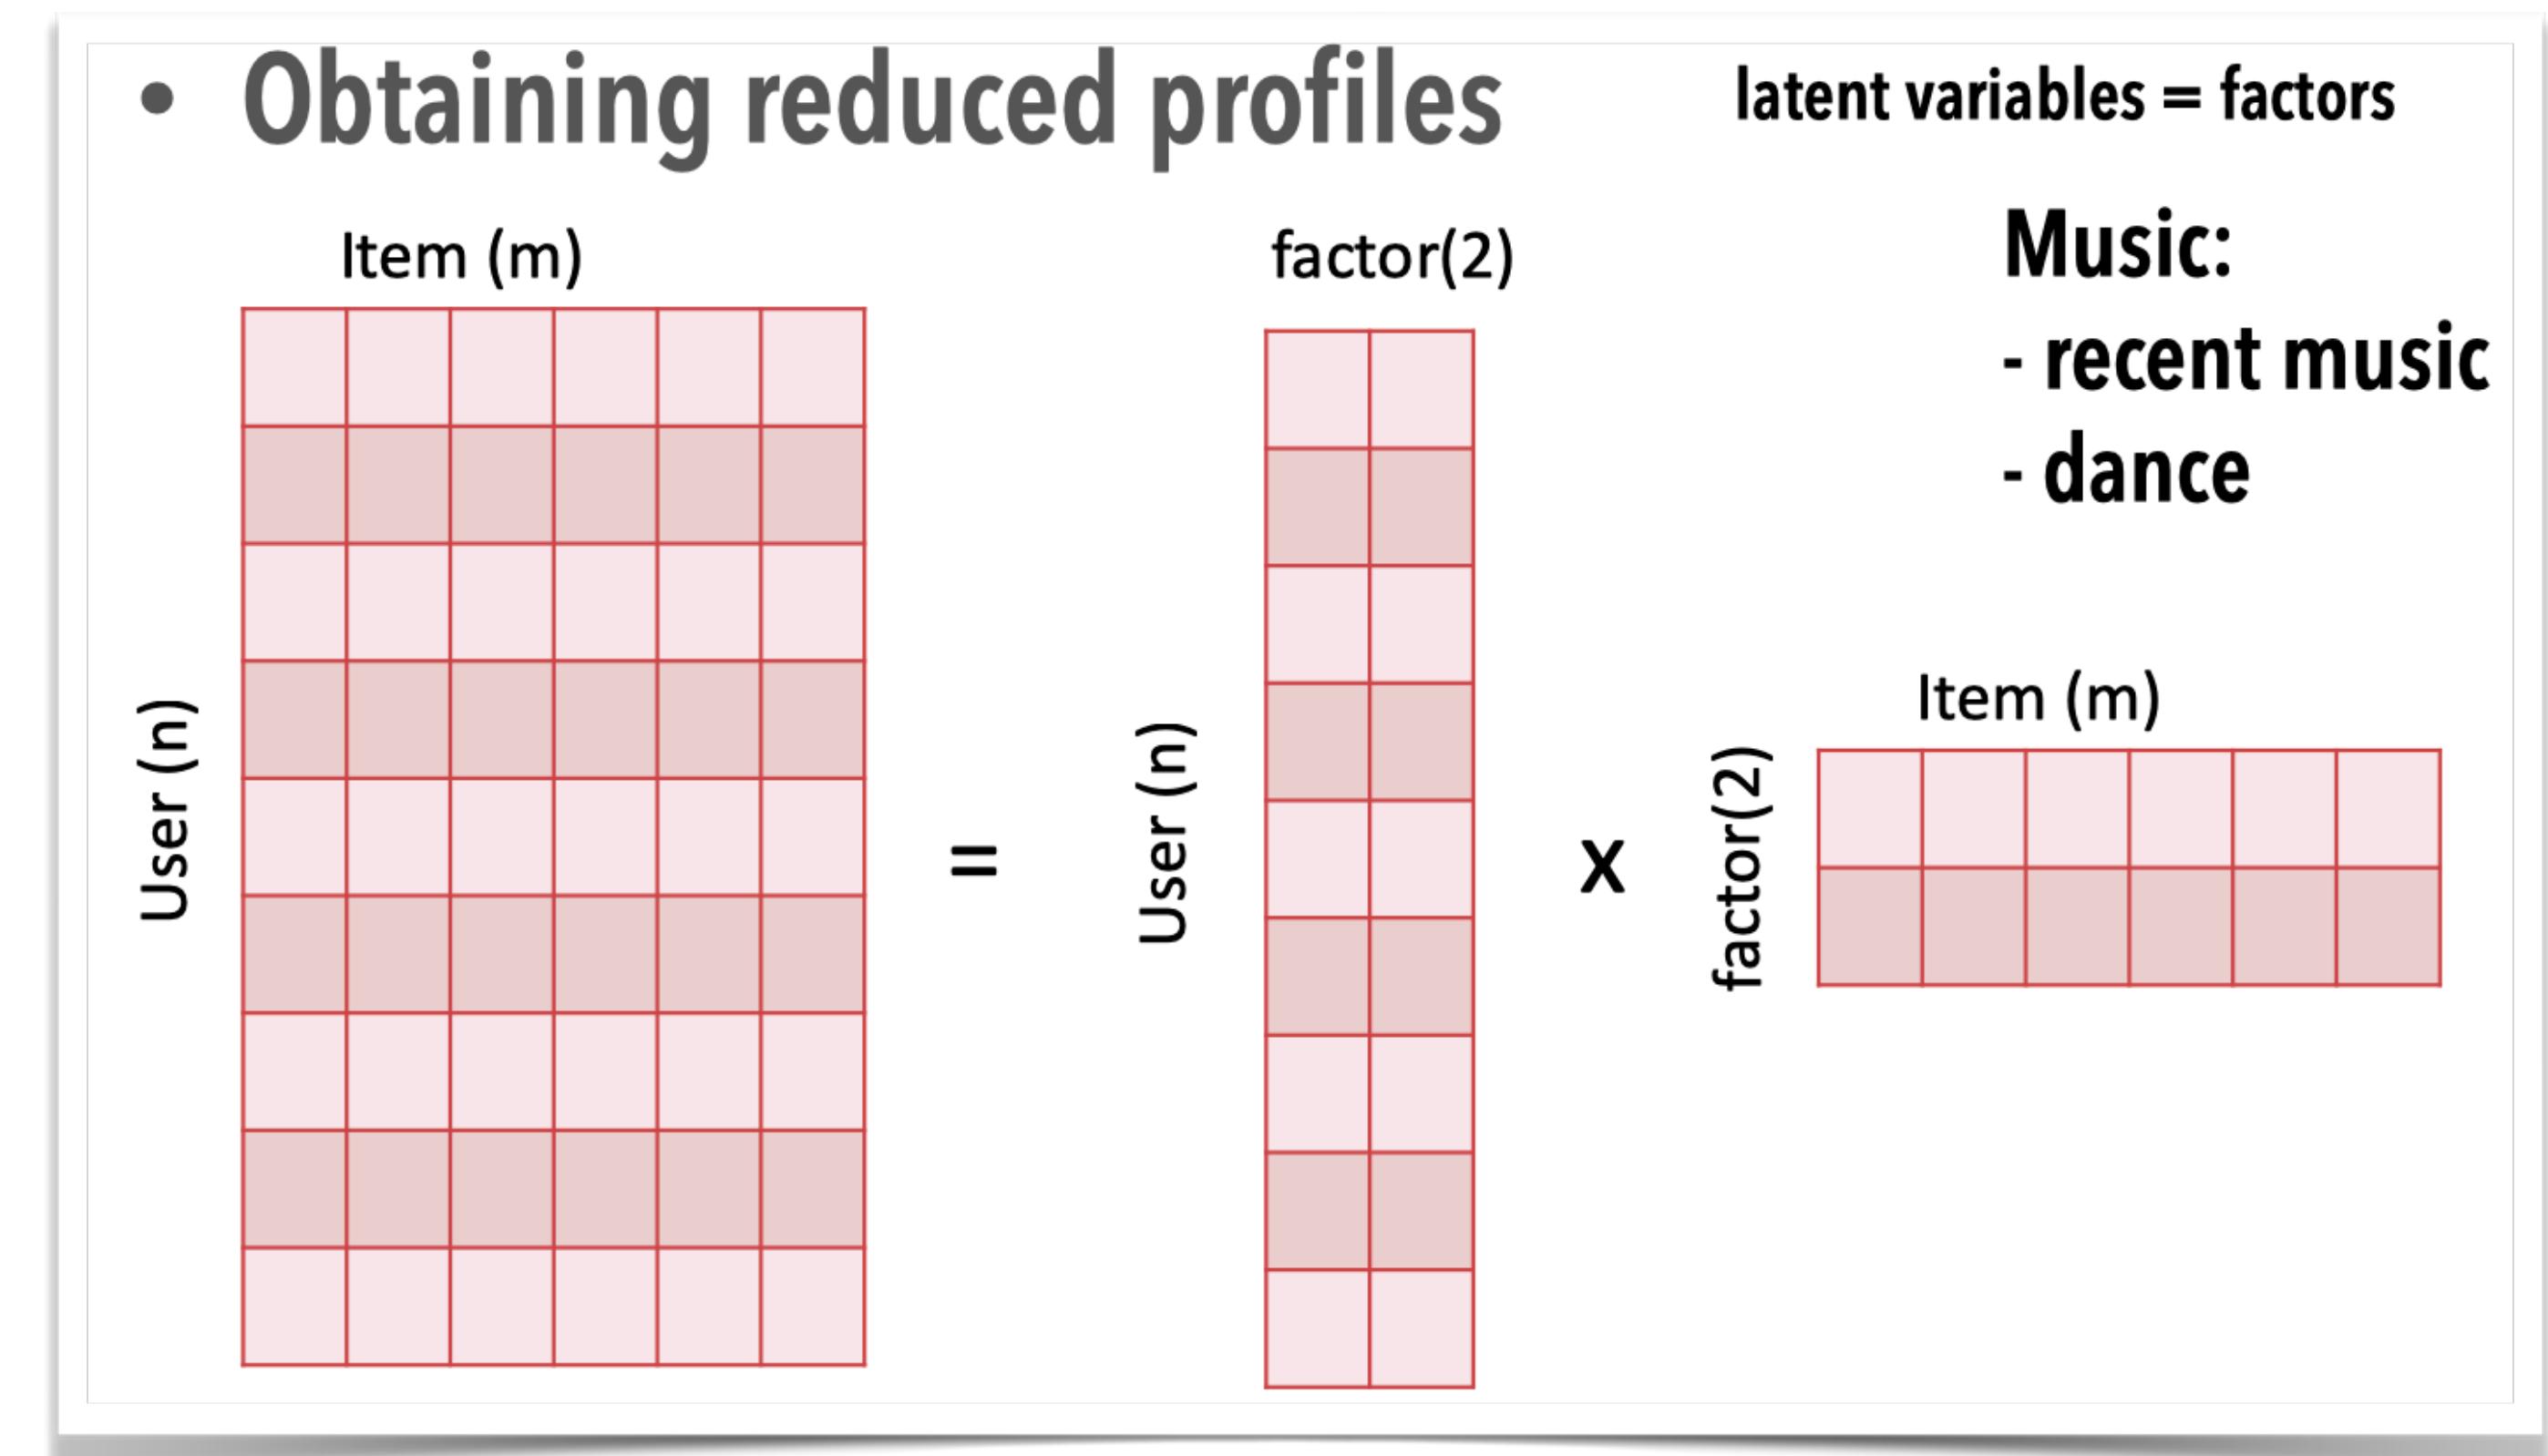

RECOMMENDATION

- ▶ Using **similarity based approaches** (aka collaborative filtering)
- ▶ solves some problems of AR
- ▶ still very sparse
- ▶ fixed (no learning)
- ▶ harder to read

RECOMMENDATION

- ▶ Dense, learned representations
- ▶ Matrix factorization
- ▶ “Optimal” features
- ▶ Low-dimensional
- ▶ Dense
- ▶ Capture semantics
- ▶ ... unintelligible

WHAT MAKES THE DIFFERENCE?

- ▶ Learning from raw data
- ▶ Smooth representation space
 - ▶ similar objects have similar representation
 - ▶ objects can be arbitrarily similar
- ▶ Dense representations
- ▶ Hierarchical structure of features
- ▶ Learning as optimisation in a continuous space
- ▶ Dealing with incomplete information in a efficient way

LEARNED REPRESENTATIONS AND TRANSPARENCY

- ▶ Learned representations are for machines, not humans
- ▶ Can we get away with it?
 - ▶ the importance of algorithmic transparency
 - ▶ explainability (XAI)
 - ▶ human in the loop
- ▶ What can we do?
 - ▶ combining symbolic and sub-symbolic ?
 - ▶ bayes networks and causality

WHAT NEXT?

WHAT NEXT IN AI?

- ▶ human in the loop / human-centric AI
- ▶ autonomy
- ▶ grounding
- ▶ causality
- ▶ green AI
 - ▶ neuromorphic, Cerebras AI chip
- ▶ edge AI
- ▶ federated learning
